

Projecting a Device via a **CABLE** on the Touch Screen

1. Power on **Only the Touch Screen.**

Note: The Dell computer behind the touch screen is not used.

is located at the bottom-right frame, and another on the Dell computer behind the touch screen at the right side.

2. Power on your laptop or other device.

3. Connect your device to a port at the right side of the touch screen through a proper cable, e.g., HDMI, VGA, etc.

Note: You may need to borrow or ask for a video cable, VGA connector, and a 3mm audio cable from the DLC front desk.

4. (Optional) Select an Input Source If Your Device Does Not Show on the Touch Screen.

If the Touch Screen does not show your device, you have to press the three dots at the mid-bottom area, select **Input Source**, and choose a right source.

Input Source

5. Click Exit to Finish, and Press the Power Button under the Lower-Right of the Touch Screen.
